We manage and integrate...

More and more services and technologies are now available in the modern day.

At we manage and integrate these technologies into your home. The traditional way of wiring homes is no longer suitable to give you and your family access to these modern services, nor is the traditional TV / DVD and Surround Sound system enough to give you access to the available technologies.

The i-Homes™ standard package not only gives you a structured managed cable system integrated throughout your home but also access to our Media controller which manages six zones allowing multiple audio sources to be delivered through our ceiling mounted speakers with easy access and control with the i-Homes™ control panels located in each of these zones.

Let the music find*

Benefits

Telephone: A Phone Point in every room, with capacity for multiple lines without the need to add extra cables. Easily upgradable to include home PABX system for room to room dialling, call transfer etc - ideal for home office.

PCs: Computer point in every room, ideal for surfing the Internet, home office, study or children's computer games.

Networking: With more than one PC in many homes, these can now easily be networked through an i-Homes™ network hub allowing all the family to share files, music, printers and for controlling other network devices.

Wireless Internet Access: With a wireless enabled laptop or pc it's never been easier to access the Internet from any room with i-Homes™ wep enabled access points strategically located throughout your home which interfaces with your Service providers modem or router.

Broadband: The i-Homes™ system also allows you access Broadband from the multiple computer points installed through your home when subscribed to a broadband service.

TV/SAT/DVD: The i-Homes™ system allows distribution of terrestrial TV, Satellite TV and DVD signals to multiple rooms, allowing you have TV in any room, control the satellite box from any room and watch the DVD in the bedroom.

Surround Sound: Homes are wired for 5.1 surround sound with speaker cables to the rear, front and centre of main TV/DVD, buried unnoticeably in the walls. Say goodbye to all those unsightly speaker wires tacked to your skirting board or draped over your fireplace.

Multi-room Audio: All your rooms are wired back to our i-Homes™ 6 zone Media controller located in our communications console allowing you turn on and off the system and control volume, selects sources, i.e. CD, radio tuner, DVD etc and select tracks via a keypad (Touch if desired) conveniently located throughout your home.

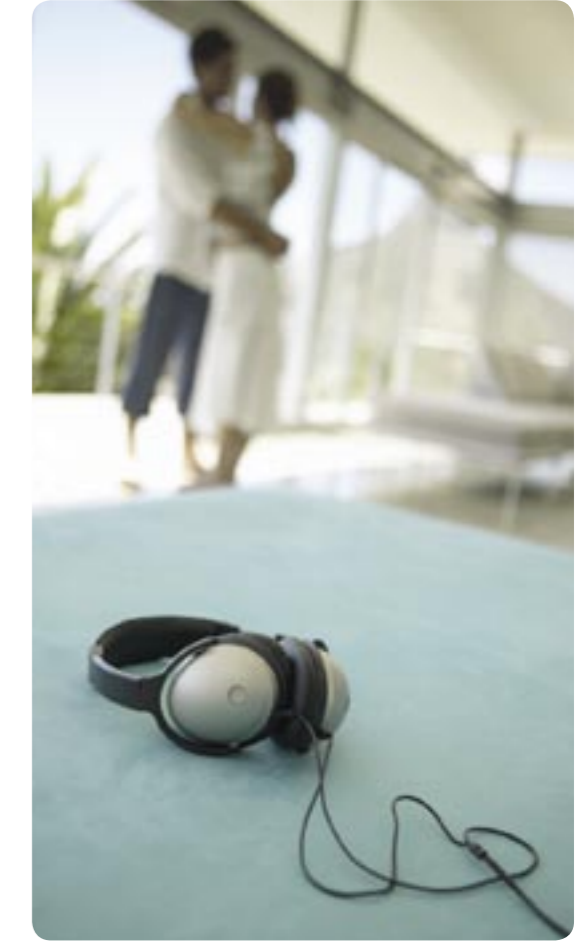

CCTV/ Security: Your home can be wired for cameras at the front or back door or other rooms such as the children's nursery and viewed on any TV set in the home, so you can monitor who calls to your home or watch the safety of your child from your living room or bedroom.

Plasma / Flat Screens: As the price of Plasma screens decrease, make sure your home is wired so that you can choose to install one when you move in or at a later stage without having to add additional cables.

Home Theatre / Projector and Screen: Why not wire your home for a home theatre system with a projector and a drop down screen, a cinema experience without ever leaving home...get your friends around and roll out the popcorn... the film is about to begin.

Satellite Broadband: Your home can be cabled for satellite broadband. This provides much higher bandwidths and speed of transfer of data than standard phone or ISDN lines. This is particularly important if you require faster service or live in an area where high speed access is other wise limited.

Door and Gate Entry systems: Control who enters your home by way of a modern entry system using the existing telephones in your home or add a video phone so you can see and talk to callers or even have them displayed on any TV set in your home. These are just some of the benefits of planning for the future with i-Homes™ 'The Smarter Home'.
